Team Name: orange_skwad
Roster: Jiayang Chen, Vincent Chi, Ray Onishi, Theodore Peters
Project Title: Trump Tweets

Proposal Summary:

Purpose of this project is to allow the user to learn about the nature of Trump language to their own desires. By providing his most commonly used words, the user will really get a feeling for what this guy tweets like. We're using the 'Trump's Tweet Archives' JSON for the tweet data.

Framework: Bootstrap

Javascript: Javascript used for animation and data parsing.

Roles:

Project manager Vincent Chi will be responsible for maintaining the devlog, making sure team members work well together, work on design documentation, be the leader in design changes, and correcting minor code issues/bugs.

Jiayang Chen will code the functionality of the word cloud and the circle graph and the interaction between them.

Ray Onishi will mostly work on front end development and making sure the website elements go in the right places.

Theodore Peters will mostly work on data retrieving and packaging from the Tweet Archives to the JS, and being able to search the database.

Timeline:

4/1: Retrieve and put the dataset (Tweet Archives) into the repo as a JSON.
4/3: Get a template word cloud and circle graph (with animations) as a working draft.
4/4: Make the cloud and circle work with the data.
4/5: Fix any bugs or glaring issues.
*4/8: Any additional features that work will be added.
